

Create an MVC project using Spring Boot & Thymeleaf (Employee Management System) and perform the following operations using appropriate mappings

1. **View** all records from the database table.
2. **Insert** new records into the table.
3. **Update** an existing record in the table.
4. **Delete** existing records from the table.

PFB: UI screenshots

The screenshot shows a web browser window with the URL `http://localhost:8080/employees`. The page title is "Employee Management System". Below the title, there is a section titled "List Employees" with an "Add Employee" button. A table displays the following data:

Employee First Name	Employee Last Name	Employee Email	Actions
Harshit	Choudhary	harshit@gmail.com	Update Delete

1) Home Page

← → ↻ ⌂ 🔍 http://localhost:8080/employees/new

🔗 ☆ 📄 🌐 📄 📄 📄 📄

Employee Management System Employee Management

Create New Employee

Employee First Name

Enter First Name

Employee Last Name

Enter Last Name

Employee Email

Enter Email

Submit

2) Create Employee

← → ↻ ⌂ 🔍 http://localhost:8080/employees/edit/1

Employee Management System Employee Management

Update Employee

Employee First Name

Harshit

Employee Last Name

Choudhary

Employee Email

harshit@gmail.com

Submit

3) Update Employee
